# mac下appium桌面版的查看ios元素信息

作者:沙陌 qq: 2879897713 appium交流群: 534129320

#### 1. 桌面版下载地址

https://github.com/appium/appium-desktop/releases/

#### 下载后安装

2. 打开appium桌面版并启动appium

点击start server v1.6.4,出现如下界面表示appium服务端启动成功

3. 配置启动参数

点击appium服务端界面的start new session, 出现如下界面

#### 添加参数完成后界面

其中app参数选择的是appium自带的测试应用,路径为/Users/lixionggang/Downloads/sample-code-master-2/sample-code/apps/TestApp/build/release-iphonesimulator/TestApp.app,红色部分为读者自身的mac用户路径

点击右下角保存,会将当前配置保存到saved capability sets里,下次使用的时候就不再配置了

点击start sessiion,即可启动测试,启动后服务端界面如果报错webdriveragent下载依赖失败,请下载翻墙软件翻墙后再试,免费翻墙软件mac版本下载地址https://github.com/getlantern/forum/issues/833

## 启动模拟器界面

启动的inspector查看元素信息界面,这估计才是很多人想要的

至此,桌面版启动inspector查看元素信息介绍完毕

5. 命令行启动appium的配置

### 终端执行

In -s /Applications/Appium.app/Contents/Resources/app/node\_modules/appium/build/lib/main.js 之后在命令行直接敲appium
